FREEDOM TO
Explore | Create | Innovate | Choose | Succeed

TmaxSoft

TmaxSoft gives your enterprise the freedom to succeed like never before

Imagine making technology choices without making compromises. Imagine if breaking free from the status quo *was* the status quo. Imagine reducing the risk of change and working with a collaborative software provider that delivers greater cost savings and a better customer experience. It's all possible with TmaxSoft.

TmaxSoft is a global software innovator that gives you the freedom to take control of your technology, so you can actively and effectively support business initiatives. We provide better data management technology for your critical IT assets so you can compete stronger, innovate faster and shift budgets toward strategic initiatives that add value—instead of operational maintenance.

> " It's all about innovation. It's exciting coming to work every day for a company that doesn't set limits and sets the bar higher. "
>
> Kelly Kim | **Assistant Manager, Global Planning Team**

A global software innovator focused on cloud, infrastructure and legacy modernization, we offer a complete stack of software solutions that help you efficiently manage and fully leverage your critical data, including:
**Mainframe rehosting**

Database modernization

Flexible middleware

Lift, shift and save with OpenFrame

GE Capital improved agility and reduced annual maintenance costs by 66%

> "One of my systems analysts was attempting to help one of our users with a data problem. He searched high and low, driving himself crazy trying to find it. After a number of screen shares and troubleshooting steps, he realized that while he thought he was on the mainframe looking for this data, he was actually on the newly re-platformed Unix environment. In other words, even my most senior guys, the guys who designed and built the original setup, couldn't tell the difference between that and OpenFrame!"

Marc Rubel
Executive Director of
**Application Development**
GE Capital

Modernizing your mainframe and moving to the cloud is essential in today's data-driven world. As your competitors switch to new technologies, your old system will become a liability. Important data locked in your mainframe may give your big data analytics tools misleading or erroneous results. Plus, older systems are expensive, lack mobile support and don't let you rapidly deploy, scale up and down, or align costs to specific big data application needs.

OpenFrame is a complete mainframe rehosting solution that lets you take (lift) your existing mainframe assets and move (shift) them to the cloud, quickly and with minimal risk. This helps your business save on costly mainframe contracts and more effectively leverage critical data, while gaining a more flexible and transparent environment. TmaxSoft's JEUS and Web2B are the middleware solutions that enable OpenFrame's three-tiered, cloud-ready architecture.

Freedom to pay for what you use with Tibero 6

KEPCO, The Korea Electric Power Corporation, chose Tibero over Oracle and experienced a cost savings of 60%

fonePaisa, a digital payments aggregator in India, received a secure, scalable, cost-effective database technology foundation for rapid growth

Most database administrators and developers only use a fraction of a database's feature set, while paying for features they're not using. And when Oracle requires migration to SE2, it will come with a significant increase in cost and complexity.

Tibero 6 is a high-performance, highly secure, highly scalable relational database management system (RDBMS) for enterprises that want to fully leverage their mission critical data. Tibero maximizes your on-premise software defined data center (SDDC) investment by embracing a simple licensing model similar to software as a service (SaaS) subscription pricing. You only pay for the cores you use, with advanced processing, management and security features bundled in, and you can reallocate savings toward innovation.

Plus, with its multi-thread architecture you can run high-performance applications, build a robust DevOps environment, experience substantial technical benefits and reduce disaster recovery costs for tier 2 and 3 applications.

> We chose TmaxSoft for Tibero's technical strengths, as well as their support capabilities. We're running a Virtual Data Center, and Tibero is certified for VMware. Flexible licensing allows us to pay for only what we use, rather than Oracle's soft partition model of licensing 100% of the cores. This will deliver real savings in CapEx and OpEX, as well as drastically lower our TCO.

Siddarth Dudheria
Product Manager

Freedom to do more for you

TmaxSoft was founded on the principle that **there is always a better way**. Nothing will stop us from creating better solutions that improve your business in ways that other companies can't. Or won't.

With our remarkable technology, fresh perspective, collaborative spirit, and unusual clarity and transparency, you'll finally have the choice you deserve. Along with freedom from status quo technology, more opportunities and faster ways to innovate, reduced risk of change, greater cost savings, and a better customer experience.

> Others see innovation from the top down. We look from the bottom up, to build a better structure and a better environment.
Dr. Daeyeon Park
Founder
TmaxSoft
